Top Ways Email Threat Protection Keeps your Business Safe

The right protection can help SMBs use email with confidence.

Answer the questions below to find out if your organization's email is at risk from cyber attacks.

Are you protecting sensitive information with encryption?
Encryption tools provide an invaluable layer of additional security, automatically scanning outgoing emails for sensitive information and encrypting accordingly.

Have you deployed a secure gateway to filter email traffic?
A secure gateway filters all incoming email traffic and utilizes multi-layered strategies for scanning, detecting, isolating and eliminating harmful messages.

Do you have expert support to maximize threat readiness?
Expert guidance on a 24/7/365 basis helps ensure your environment is always fully updated, operating correctly and responding to the latest threats.

Does your environment assist with incident response and user error?
Advanced, fail-safe functionality can help mitigate damage and quicken remediation if a malicious email enters a user's inbox.

Are you able to share important files safely and efficiently?
The right email service lets you seamlessly and safely share files that meet compliance requirements and are not constrained by inbox size limitations.

Do you have compliance support in place?
Failing to stay compliant can carry steep financial or reputational penalties. Email safeguards help you adhere to industry standards or governmental regulations.

Can your current environment effectively quarantine risky emails?
When a questionable message arrives, it needs to be isolated ASAP to a secure, cloud-based sandbox environment where it can be rigorously analyzed and disarmed.

Are you set up to weather disruption and mitigate productivity loss?
When an email server goes down, the right solution will help maintain mission-critical messages by spooling them over until restoration can occur.

10 Email Security Facts that Reveal the Truth About Email Threats - Help Desk Cavalry

opentext™ | Cybersecurity

The Solution: **Webroot™ Email Threat Protection (ETP)**

01 Multi-layered threat filtering

Threat filtering rigorously analyzes multiple email elements by filtering all inbound and outbound traffic and applying key phrases, activity patterns and pre-built filters. This advanced, multi-layered approach reduces false positives and negatives, and ensures an effectiveness rate of 99.99%.

02 Link protection

ETP Link Protection with time-of-click analysis scans all links in emails for potential threats before they are opened, protecting users from harm. Additionally, the Link Protection feature can help to keep employees productive by preventing them from clicking on distracting or dangerous links while working.

03 Attachment quarantine

ETP Attachment Quarantine Disarming and Sandboxing feature helps to protect organizations from malicious emails by detecting and quarantining dangerous attachments, disarming any hidden malicious code in those attachments, and then analyzing their behavior.

04 Message retraction

Office 365 message retraction in ETP provides an easy way to retract a message after it has been sent. It offers an extra layer of security against threats, and can help to protect an organization's reputation by preventing recipients from receiving potentially harmful emails.

05 Simple to install

ETP software is simple to install, manage, customize and support. It can be installed on any device that has an internet connection and supports a web browser. The software can be customized to meet the specific needs of organizations.

06 Always-on support

Take advantage of award-winning Phenomenal Care® support. Available throughout the U.S., works 24/7/365 to identify new threats, conduct system updates and provide warnings.

Ready to take your email protection to the next level? Get in touch today!

Adding Brightcloud Threat Intelligence provides your ETP solution with even greater visibility through its Streaming Malware Detection Service and Real-Time Anti-Phishing features.
